

A Graph-grounded Example

Question: For step 2 sputtering, what is the required atmosphere / gas environment?

A Vacuum

B N₂

C Ar

D Ar + O₂

B Stage 0: Offline Process Memory Construction

C Stage 1: Analogy Retrieval

D Stage 2: Symbolic Scorer

A Route-level reasoning

A1	Route retrieval	bigrams + sequence similarity
A2	Missing step	position/form/condition voting
A3	Next activity	prefix_next + bigrams + retrieved

B Conditional reasoning

B1	single condition	matched-step condition voting
B2	full condition set	triplet voting

C Tool reasoning

C	Tool selection	tool frequency voting
---	----------------	-----------------------

D Order reasoning

D	Process ordering	topological constraint satisfaction
---	------------------	-------------------------------------

E Stage 3: LLM Planning & Decision

LLM Planning

- Question
- Top-k retrieved process summaries
- Symbolic option scores

LLM Decision

Given plan + evidence,
Choose the best option
Output: Ar
