Module#prepended_modules [#8026]

```
mod.prepended_modules(include_ancestors=true) -> array
```

Returns the list of modules prepended modules. Unless the optional argument is false, prepended modules of the ancestors are also returned.

```
module Mixin
end

module Outer
  prepend Mixin
end

Mixin.prepended_modules    #=> []
Outer.prepended_modules    #=> [Mixin]
```

*Related: should included_modules also list prepended modules and should there be an option to list only its own included modules [#8841]*
