

Rocket® Data Intelligence™: For Data That Means Business

When you can see everything, you can do anything.

Maximize insight to amplify impact

Organizations with advanced data intelligence consistently outpace their competitors, being 23 times more likely to acquire customers and 19 times more likely to be profitable. Your data is the key to your future. Are you fully leveraging it? Can you even find all of it? Too often, it's trapped in silos or tangled in wildly diverse systems.

Rocket® Data Intelligence™ (DI) cuts through the chaos. As a highly automated metadata management platform, DI is built to handle even the most complex data environments. It connects more tools and systems than any other platform on the market, so you don't waste time manually mapping data across systems. From scanning code and logs to extracting APIs and more, our flexible metadata collection methods provide maximum automation to fast-track insights. Now you can leverage complete, trusted, and actionable data across every environment, no matter how complex.

Industry leaders understand the strategic value of their data and treat it like any other critical corporate asset. DI scans all your systems — mainframe, cloud, ETL, SQL, and BI — to automatically map and connect every corner of your data landscape. Our patented best-in-class processing engine digs deeply into technologies like mainframe and IBM® i to unlock operational insights competitors can't see. The result is a trusted, comprehensive inventory and the context needed to understand its relevance, trustworthiness, and value. And with fully customizable visualization, query, and governance tools, every team has the confidence and clarity to drive results without heavy manual processing.

Data lineage is crucial to compliance, but beyond that, it's essential to obtaining the data driven insights our organization needs. We need to trust our data to make informed, strategic decisions, which means we need to be able to find it, understand it, and know it's accurate. This project in partnership with Rocket has helped us establish that trust in our data."

MEMBER OF THE DATA GOVERNANCE TEAM

Rocket Software

The Rocket Data Intelligence edge

01 Data discovery on autopilot

Automated data transformation parsing maps your data universe at lightning speed.

02 Compliance covered

Keep data clean, governed, and audit-ready, no more last-minute scrambles.

03 Integrate everything

Cloud, mainframe, distributed — whatever systems you use, find and connect it all with no headaches.

04 Risk managed

Detect and stop data issues before they cause downstream disruptions, failures, or fines.

05 Visual, intuitive, powerful

See your data landscape like never before. Act on it without needing an engineering degree.

06 Real business impact

Unlock new opportunities, optimize resources, and stay at the top of your game.

Rocket Data Intelligence automatically discovers and catalogs data across mainframe, IBM i, cloud, and distributed systems to stitch everything into a single, searchable map. It builds field level lineage and business mappings with automated classification and quality signals, delivering instant impact analysis and audit ready evidence across even the most complex estates.

Powering your potential

01 Healthcare Audit-ready quality measures from EHR to report

A health system using ADABAS on z/OS for critical patient data, Kafka, ADF/Informatica, Amazon S3, Databricks Unity Catalog, and Power BI adopts Rocket DI to govern the 30-day readmission lineage. When the KPI spikes, RDI back traces lineage Power BI → Databricks → S3 → Informatica → Kafka → ADABAS on z/OS and finds that a new ICD 10 reference version was recently loaded, changing the exclusion flag for several codes. RDI shows owners and affected reports, tables, paths, and source files, and validates the fix, restoring accurate, audit-ready quality reporting.

02 Manufacturing Keeping OEE honest with instant impact and root cause analyses

A discrete manufacturer running CA-IDMS/DB, Kafka, AWS Glue, Snowflake, and Power BI uses Rocket DI to map and govern OEE lineage. When the OEE tile dips, RDI back-traces Power BI → Snowflake → Glue → Kafka → CA-IDMS/DB and highlights a SQL/ETL WHERE filter on planned_stop_code that doesn't include a newly introduced code, skewing downtime and making OEE look worse. Impact analysis lists the affected reports, objects, jobs/topics, and the responsible owners/stewards. Accurate OEE is restored in minutes, with no line stoppage and full audit-ready lineage.

03 Retail Getting store pickup promises right

A national retailer using IBM i/Db2® for POS transactions, Informatica, AWS S3, Databricks Unity Catalog, and Power BI uses Rocket Data Intelligence to govern the ATP pipeline. When orders fail, RDI traces Power BI → Databricks → S3 → Informatica → IBM i/Db2 POS and flags two parallel Informatica jobs populating the same target and creating a duplicate “returns” feed. It shows owners and impacted reports, and confirms the fix — restoring accurate ATP, lowering cancellations, and providing audit-ready lineage across legacy and cloud.

04 Financial services Defensible liquidity ratios at every close

A bank running z/OS®, DataStage, Snowflake, and Tableau uses Rocket DI to govern the Basel Liquidity Coverage Ratio (LCR). When the ratio dips, RDI traces Tableau → Snowflake → DataStage → z/OS, flags a changed Informatica lookup that reclassified sweep accounts. It shows owners and impacted disclosures and then confirms the fix — restoring the metric with audit-ready evidence.

These are the kinds of future states we can help you achieve. From customer and operational data to market trends and compliance requirements, modern enterprises need to see their data — all their data — to fuel their futures.

Simply built to manage complex data

Whether you're a Fortune 500 giant or a scaling enterprise, Rocket Data Intelligence delivers the clarity and confidence you need to move fast and stay secure. As part of the Rocket® DataEdge™ suite, it connects even the most complex and siloed data environments to reduce costs, drive better AI and analytics initiatives, and enable solid business decisions.
